parkour challenge

setup (GitHub repo link)

- Please download the unity project from
- <https://github.com/wenjietseng/VR-locomotion-parkour>
- open VRParkour folder as a unity project

The screenshot shows the GitHub repository page for 'VR-locomotion-parkour' by user 'wenjietseng'. The repository is on the 'main' branch and has 1 branch and 0 tags. The commit history shows the following changes:

Commit Message	Commit Hash	Time	Commits
update readme	efce308	5 hours ago	4
VRParkour		5 hours ago	
LICENSE		6 hours ago	
README.md		5 hours ago	
air-grabbing-demo.apk		5 hours ago	

The README.md file content is visible below the commit history, showing the repository name 'VR-locomotion-parkour'.

parkour scene

the
route

starting
point

2nd banner

3rd banner

1st banner

final

four
banners

banners

please pass through the
banner to trigger each path

[1]

continuous curves

coins: 17

go back to the start of the current part

- If you started a part or the parkour (i.e., passed through 1st , 2nd , 3rd banner) **but somehow got lost** in the scene, press **Y** or **B** to reposition yourself to the banner position of that part.

records

- Report the used time and collected coins in each part and in total.

Parkour Finished!

[Records]

part1: 18.33, 17/17

part2: 12.20, 17/33

part3: 7.13, 16/24

total: 37.66, 50/74

locomotion technique

guidelines

1) time ↓ & coins ↑

guidelines

- 1) time ↓ & coins ↑
- 2) By default, we assume the boundary is **stationary**. This means the user is sitting or standing at the same place, and there is not much space.

guidelines

- 1) time ↓ & coins ↑
- 2) By default, we assume the boundary is **stationary**. This means the user is sitting or standing at the same place, and there is not much space.
- 3) Feel free to design your favorite locomotion ([Naruto run](#)? There is a [superhuman sports](#) in Japan)

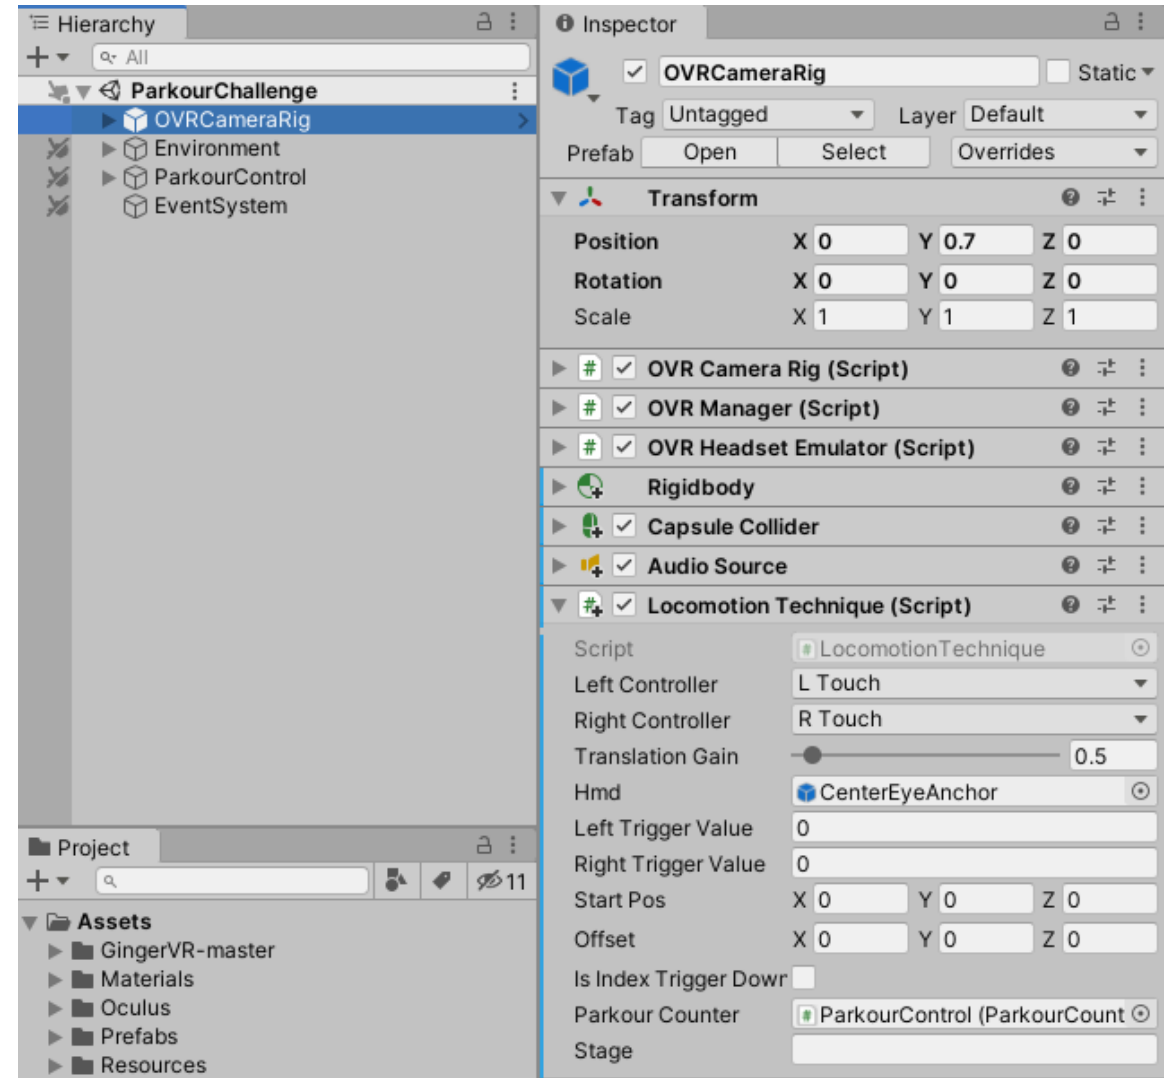

guidelines

- 1) time ↓ & coins ↑
- 2) By default, we assume the boundary is **stationary**. This means the user is sitting or standing at the same place, and there is not much space.
- 3) Feel free to design your favorite locomotion ([Naruto run?](#))
- 4) Please don't modify the size of the player's collider or develop an automatic coin collector.

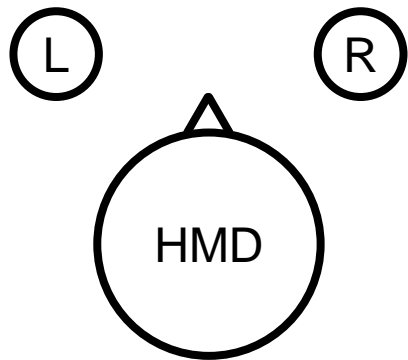

Assets > Scripts > LocomotionTechnique.cs

- Implement your own locomotion in this script
- This script is attached to the OVRCameraRig
- Feel free to add more scripts if your needed to.

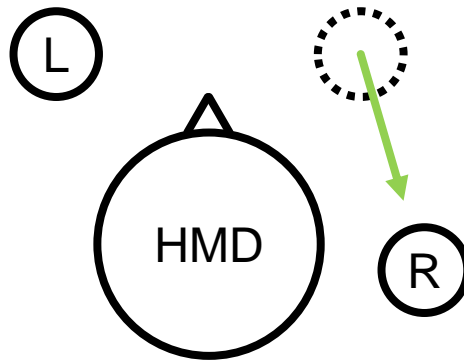

Example: grabbing the air

1)

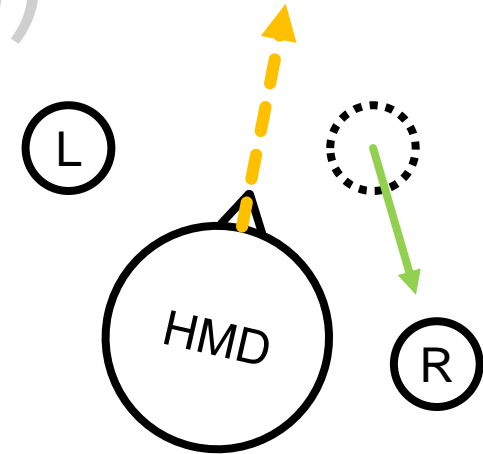

press the
index trigger

2)

compute the
offset vector

3)

add the **offset**
along the **forward**
of the HMD

Example: grabbing the air

- Since I put the code in Update(), if the user does not release the trigger, the offset will keep adding to OVRCameraRig.
- If both hands trigger → sum up two offset vectors

- 1) keep cybersickness in mind
- 2) speed and control
- 3) ease of use (learnability)

cybersickness

- Problem: locomotion causes the conflict of human sensory system (e.g., moving in VR but standing in the real world)
- Some approaches:
 - **motion**: walking-in-place, arm swinger, and so on.
 - **visual**: reducing field of view (e.g., mask, blur, motion lines)
- References: [GingerVR](#)

speed and control

- There is a trade-off between **time** ↓ & **coins** ↑.
 - *Teleport*: reduce the time of traverse, but repeat a lot while collecting coins.
 - *Grabbing the air*: can be quite fast, but cannot control well while very fast.
The technique also has bigger cybersickness issue.
 - *Walking in place*: less cybersickness, high control, but perhaps feel fatigue and take a long time.

ease of use (learnability)

- Let's imagine a spider man locomotion.
 - Could users learn the spider man locomotion quick and smooth?

ease of use (learnability)

- Let's imagine a spider man locomotion.
 - Could users learn the spider man locomotion quick and smooth?
- Users are using your technique at their first time, they might not be able to understand the interaction (design) as you did.
- Need some times to fine tune your technique (e.g., the parameters of speed).

bug report

- The game mechanism is in another script -- ParkourCounter.cs
- If you found any bugs or somewhere could be improved in our parkour challenge, please send us an email, we will then decide whether to update the GitHub repo.
